

I N T R O D U C I N G

Ethernet/WiFi/4G Hub

Hub receives the temperature data from the loggers up to 700 meters in range. Connected to the Internet via Ethernet/ Wifi / 4G it enables real-time and remote monitoring.

**SIMPLE
PLUG & PLAY**
SOLUTION

RF Communication

Receive the signal within 700 meters in range

Compact Size

Place the hub conveniently in your facility

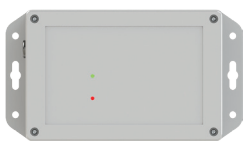

Immediate Alerts

Get notified in case of unexpected excursions

Ethernet / Wifi / 4G

Hassle-free way to transfer data to any database in the world

Ethernet/WiFi/4G Hub

C A T A L O G U E C A R D

○ Communication with loggers

869MHz for Europe / 920.9MHz for USA, Asia, Brasil etc.

○ Connectivity to the network

Ethernet / Wi-Fi / 4G (800, 850, 900, 1800, 1900MHz)

○ Communication with database

Bidirectional, using UDP protocol using AES128 encryption

○ Authentication

128bit key

○ Radio range

Up to 700 meters in free, open space

○ Power supply

5V DC Power Adapter / Internal battery

○ Operating temperature

From -20°C to + 60°C

○ Housing

ABS

○ Dimensions

180mm x 100mm x 45mm

○ IP

44
